The stomach participates in all digestive activities except ingestion and defecation. It vigorously churns food. It secretes gastric juices that break down food and absorbs certain drugs, including aspirin and some alcohol. The stomach begins the digestion of protein and continues the digestion of carbohydrates and fats.

Gastroparesis is defined as a disorder characterized by delayed gastric emptying in the absence of mechanical obstruction. However, symptom presentation and severity can be extremely variable and rather broad, and may include any of the following: nausea, vomiting, retching, bloating, early satiety, loss of appetite, weight loss, and/or abdominal pain. 1 Associated conditions including ...

**As the Stomach Churns—or Not! : Journal of Clinical ...**

The stomach contracts and churns, turning stomach contents into a partially digested substance called chyme. Chyme passes from the stomach through the pyloric sphincter into the small intestine where it is further digested. The stomach is situated in the upper left part of the abdomen.
