A CT colonography doesn't require sedation and is just as accurate at detecting most precancerous polyps. For a traditional colonoscopy, a doctor inserts a flexible metal tube with a camera on the end into the colon through the rectum. The tube is maneuvered through the entire length of the colon, which is usually 5 to 6 feet long.

Colonoscopy vs. CT Colonography: Which is Right For You?

The primary differences between CT colonography and traditional optical colonoscopy are that CT colonography uses a high technology X-ray scanner and advanced computer programs to create detailed images of the tissues inside the colon. It does not require sedation, injections or the insertion of a camera into the colon, and the procedure takes ...
