Achieving a long, healthy life often requires the input of scarce resources, and that makes it, at least in part, an economic problem. About one out of every six dollars spent in the U.S. economy goes to some form of healthcare, including spending on physicians, nurses, dentists, hospitals, pharmaceutical drugs, and medical research scientists.

The Economics of Healthcare - Harvard University

The authors estimate that the economic impact is much higher, perhaps nearly \$1 trillion annually when quality-adjusted life years (QALYs) are applied to those that die. Using the Institute of Medicine's (IOM) estimate of 98,000 deaths due to preventable medical errors annually in its 1998 report, *To Err Is Human*, and an average of ten lost years of life at \$75,000 to \$100,000 per year, there is a loss of \$73.5 billion to \$98 billion in QALYs for those deaths--conservatively.
