Description Title: Fundamentals of Light and Lasers, 3rd Edition
A technician-level, standards-based comprehensive study of
basic photonics concepts. For students in AAS optics,
laser/electro-optics, and photonics enabled technology
programs, high school dual-credit courses, or for employed
technicians working in photonics enabled areas.

The basic structure of any laser is based on an active medium (either a gas or semiconductor) contained between multiple reflectors. A laser's reflectors contain light by oscillating it through a medium repeatedly allowing the energy to coherently build up with each pass using a process called stimulated emission.

PHTN9120: Fundamentals of Light Sources and Lasers. (2014 Fall) Course Description. The nature of light itself as well as the atomic processes leading to light production, the mechanisms of incoherent light production, as well as the fundamentals of laser action will be examined. Incoherent sources of emission including blackbody radiators, gas discharges, and semiconductor sources will be studied and modeled and spectroscopic emissions analyzed.

Photonics and Laser Technology < Montana State University

Introduction to Lasers - Ordinary natural and artificial light is released by energy changes on the atomic and molecular level that occur without any outside intervention. A second type of light exists, however, and occurs when an atom or molecule retains its excess energy until stimulated to emit the energy in the form of light.
