## Photography

Gum Printing is deceptively easy. Make a photographic emulsion by mixing watercolor paint with a light-sensitive chemical. Coat that emulsion onto paper and let it dry. Expose the dry emulsion to sunlight for a few minutes beneath a transparency.

### **What is a Gum Print - Gum Bichromate**

Gumoil printing was introduced in the 90th of the last century by American photographer Karl Koenig. Gumoil or Gumoil printing is the method for producing photos with gum, chromium salts and oil paints. It's painstaking and very expressive photographic method that combines unique author's point and documentary photography.

There is a lot of other things you can do with gum bichromate. You can mess with the digital negative or change the watercolor pigment color. And, if your feeling particularly adventurous, you can add layers of color by painting each layer on top of each other. If you do all three colors, you will get a tricolor print. Good Luck!

### **Gum Bichromate : 19 Steps - Instructables**

THE GUM BICHROMATE PROCESS. The gum bichromate process, like much photomechanical printing, depends upon the reaction when a dichromate salt is mixed with an organic colloid, e.g. a gum or gelatin, and how that reaction is speeded up when the mixture is exposed to light.
