Selecting Lubricants Based on Specifications Alejandro Meza, Noria Corporation Effective lubricant selection must strike a balance between quality, application and affordability. In order to achieve and maintain this balance, lubricant specifications should be created to serve as a guideline for what to purchase and how to use it.

Selecting Lubricants Based on Specifications

Chain lubricant: Properly lubricating your chain helps extend the life of your drivetrain. Always apply bicycle-specific lube oil to a clean chain. There are two types of lube: wet or dry. Wet lube is best to use when you’ll be riding in wet conditions. It strongly adheres to the drivetrain and is less likely to rinse off in rain.

At low speed, grease lubrication is a good choice. For medium and high speeds, splash lubrication and forced oil circulation lubrication are more appropriate, but there are exceptions. Sometimes, for maintenance reasons, a grease lubricant is used even with high speed. Table 13.1 presents lubricants, methods and their applicable

Lubrication of Gears | KHK Gears

When applied to warm metal, this lubricant seeps and works itself deep into the structural pores. It then forms a slick and protective film with repeated applications. Overall this process reduces the friction of moving parts in your rifle and the likelihood of corrosion when you store your rifle away for long periods.
